

LLC “VETSERVISPRODUKT”

Company Profile

1. History of the Company's Establishment

LLC “Vetservisprodukt” was established in 2017 as a specialized veterinary and agricultural enterprise based on many years of practical experience in production, veterinary medicine, livestock and poultry farming, feeding of farm animals and poultry, and the use of therapeutic and preventive feed additives.

The founders of the company are Lenkov Leonid Hryhorovych, Candidate of Agricultural Sciences, Doctor of Veterinary Medicine, specialist in feeding, veterinary support, disease prevention and improvement of farm animal productivity, and Zadorozhnii Viacheslav Viktorovych, a production technologist with extensive practical experience, who is currently defending our country in the ranks of the Armed Forces of Ukraine.

The idea of creating the company arose not as an ordinary commercial project, but as an aspiration to combine production experience, veterinary science, practical work with farms and a real understanding of the needs of the agricultural sector. People close in spirit and family members were involved in the development of the company, and the internal culture was founded on family values: trust, responsibility, mutual support, honesty, commitment to a common cause and respect for partners.

Since its establishment, the company has gradually developed into a team of specialists capable not only of supplying products, but also of developing, implementing and supporting effective solutions for livestock and poultry farming. LLC “VETSERVISPRODUKT” combines production, a scientific and practical approach, veterinary experience, technological support and a deep understanding of the needs of agribusiness.

2. Company Mission

The main mission of LLC “Vetservisprodukt” is to introduce modern feed additives, veterinary and technological solutions in Ukraine that help farms maintain the health of animals and poultry, increase productivity, reduce the negative impact of mycotoxins, improve feed efficiency and ensure the stability of production processes.

A separate strategic direction of the company is the development of approaches aimed at reducing the use of antibiotics in livestock and poultry production. The company supports the Antibiotic-free approach, i.e. the implementation of technological solutions that make it possible to raise animals and poultry without prophylactic or excessive use of antibiotics. This approach meets modern requirements for safe food production, reduces the risks of antimicrobial resistance and promotes the development of responsible agricultural production.

3. Activities, Production and Customers

LLC “Vetservisprodukt” operates in the field of veterinary and agricultural support for livestock and poultry enterprises in Ukraine. The main areas of the company’s activity are the production and supply of therapeutic and preventive feed additives, veterinary products, disinfectants and detergents, as well as the provision of veterinary and technological support to enterprises of the agro-industrial complex.

The company supplies products to livestock complexes, poultry enterprises, pig farms, cattle farms, feed mills, farming enterprises, state-owned enterprises and research farms. The products are used to maintain the health of animals and poultry, prevent diseases, increase productivity, improve feed digestibility, reduce the negative impact of mycotoxins, ensure disinfection, biosecurity and stability of production processes.

LLC “Vetservisprodukt” works with both small and medium-sized farms and large industrial producers that are among the leading enterprises of the Ukrainian agro-industrial complex. Such partners include companies such as LLC Agro-Oven, LLC Goodvalley, LLC Barkom, LLC Epicur and other production structures whose activities are significant for the markets of meat, poultry, pork, dairy products and compound feed production.

For small farms, the company acts as a partner that provides access to specialized products, professional advice and practical support. For large enterprises, stable supply, product quality, technological compatibility with production programs, veterinary support and the ability to respond promptly to production challenges are particularly important.

4. Production Base and Human Resources Potential

An important advantage of the company is the availability of its own production base. The company’s own developments are implemented at the plant of LLC “Vetservisprodukt”, which has a specialized configuration that, according to the company, is unique in terms of the combination of production, technological and functional capabilities and is the only one in the world in such a configuration. This configuration makes it possible to combine raw material preparation, component mixing, production of complex feed additives, packaging, quality control, storage and further supply of products to agricultural enterprises.

The company employs scientists, technical specialists and professionals with extensive practical experience in veterinary medicine, feeding, livestock and poultry farming, feed additive production, biosecurity and technological support. The combination of scientific, production and practical experience enables the company to ensure a complete work cycle: from idea, development and production to implementation of products on farms and control of their effectiveness.

The company is not limited to standard trading activities, but implements an integrated model of work: product development, production, supply, veterinary and technological support, recommendations for use, and adaptation of solutions to the specific conditions of farms.

5. Company Resilience

Since its establishment, LLC “Vetservisprodukt” has gone through a difficult path of development and has repeatedly confirmed its resilience. The company survived the COVID-19 pandemic while preserving jobs, business relationships, production activity and the ability to supply customers with the products they need.

After the beginning of the full-scale invasion, the company continued to operate despite complex economic, logistical, staffing and security challenges. During this period, LLC "Vetservisprodukt" preserved its team, continued to fulfill contractual obligations and supplied livestock and poultry enterprises with veterinary products, feed additives, disinfectants and detergents.

In December 2025, the company suffered as a result of massive shelling by the Russian Federation; as a result, the office and office property were lost. Fortunately, there were no human casualties or injuries. Despite significant material losses, the company did not cease operations, preserved its working processes, continued cooperation with customers and continues to perform important functions for the agricultural sector.

The company is already known not only in Ukraine but also beyond its borders. Thanks to its own developments, patents, international scientific publications, cooperation with partners and practical implementation of products, LLC "Vetservisprodukt" is building the reputation of a Ukrainian company capable of creating modern veterinary and feed solutions of practical importance for agricultural production.

6. Scientific Achievements, Patents and International Scientific Publications

LLC "Vetservisprodukt" has its own scientific and technical developments, patents and copyright materials that confirm the specialized nature of the company's products. One of the key products is the complex preparation "Gepasorbex", which is used in the feeding of farm animals and poultry as a hepatoprotector and mycotoxin deactivator.

Today, we can confidently state that the feed additive Gepasorbex, in a controlled study, can compete with products manufactured in the United States and Germany.

The scientific and technical basis of "Gepasorbex" is confirmed by Copyright Registration Certificate No. 90270 for the article "Use of the Feed Additive in Feeding Farm Animals: GEPASORBEX - Hepatoprotector and Mycotoxin Deactivator" by LLC "Vetservisprodukt", in which Lenkov Leonid Hryhorovych is listed among the authors, as well as by utility model patents No. 140290 and No. 140289 concerning methods of using the preparation to increase meat productivity in sheep and quails.

The effectiveness of the feed additive "Gepasorbex" is confirmed by scientific publications in Ukrainian and international journals. Of particular importance is the publication in the Online Journal of Animal and Feed Research: Faustov R., Lykhach V., Lykhach A., Shpetny M., Lenkov L. "Effect of a new complex mycotoxin adsorbent on growth performance, and serum levels of retinol, tocopherol and 25-hydroxycholecalciferol in pigs fed on mycotoxin-contaminated feed", 2022, Vol. 12, Issue 1, pp. 07-13, DOI: 10.51227/ojafr.2022.2. This article examines the use of "Gepasorbex" as a complex mycotoxin-adsorbing feed product in pig feeding.

The availability of patents, a copyright certificate, scientific publications, own production, practical implementation of products and cooperation with agricultural enterprises allows LLC "Vetservisprodukt" to be considered an enterprise that has specialized solutions with limited availability of analogues in the domestic market and important significance for livestock farming, poultry farming, biosecurity and the stability of the food supply chain.
